

**Project Design Phase-II**  
**Technology Stack (Architecture & Stack)**

Date	14 November 2022
Team ID	PNT2022TMID21090
Project Name	Visualizing and Predicting Heart Diseases with an Interactive Dash Board
Maximum Marks	4 Marks

**Technical Architecture:**

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

**Table-1 : Components & Technologies:**

S.No	Component	Description	Technology
1.	Importing data	Data Import lets you upload data from external sources and combine it with data you collect viaAnalytics	Python, NumPy, pandas.
2.	Data Cleaning	Data cleaning is a process by which inaccurate,poorly formatted, or otherwise messy data is organized and corrected	Python, NumPy, pandas.
3.	Data Pre-processing	Data pre-processing, a component of data preparation, describes any type of processing performed on raw data to prepare it for another data processing procedure	Python, NumPy, pandas and SciPy
4.	Training data	Training data is the subset of original data that is usedto train the machine learning model,	Python, NumPy, pandas and SciPy
5.	Testing data	Test data is data which has been specifically identified for use in tests, typically of a computer program.	Python, pandas and SciPy
6.	Machine learning model	A machine learning model is a file that has been trained to recognize certain types of patterns. You train a model over a set of data, providing it an algorithm that it can use to reason over and learn from those data	NumPy, SciPy, pandas, sklearn
7.	Improve model performance	Accuracy is one metric for evaluating classification models. Informally, accuracy is the fraction of predictions our model got right.	sklearn
8.	Checking accuracy	A data accuracy check, sometimes called a data sanity check, is a set of quality validations that take place beforeusing data.	sklearn

**Table-2: Application Characteristics:**

S.No	Characteristics	Description	Technology
1.	Collection of data	Data collection is the process of gathering, measuring, and analysing accurate data from a variety of relevant sources to find answers to research problems, answer questions, evaluate outcomes, and forecast trends and probabilities	Python, numpy, pandas
2.	EDA Analysis	Exploratory Data Analysis (EDA) is an approach to analyse the data using visual techniques. It is used to discover trends, patterns, or to check assumptions with the help of statistical summary and graphical representations	Python, EDA tools
3.	Train & Test split of data	The train-test split is used to estimate the performance of machine learning algorithms that are applicable for prediction-based Algorithms/Applications. This method is a fast and easy procedure to perform such that we can compare our own machine learning model results to machine results.	Basic imports of python such as scipy, numpy, pandas
4.	Model prediction	Predictive modeling is a commonly used statistical technique to predict future behavior.	Sklearn import package
